

Heat Treating Specialist

Penn Machine is looking for individual that can coordinate and administer process functions, document control, and continuous improvement with heat treating requirements and operations.

The daily activities of this position are diverse but generally will include the following:

Developing, writing, instituting and executing manufacturing procedures for heat treatment of products.

Involvement with the Quality Assurance Departments and purchasing on material specifications/requirements.

Witness and optimization of manufacturing process for end results.

Failure analysis and disposition of internally and externally rejected forging, including implementation of necessary corrective actions.

Research and development projects for process improvement and product development.

Review and develop new procedures and controls for heat treating ferrous and non-ferrous materials.

Penn Machine takes great pride in our products, our customers and our employees. We offer great benefits that include competitive wages, health insurance, prescription coverage, life insurance, dental coverage and 401k. See for yourself and visit www.pennusa.com
